The Canadian Geotechnical Society | La Société Canadienne de Géotechnique

CGS Luncheon Presentation

A Well-Engineered Site Investigation

Presented by:
Alistair James, P.Eng.
Hatch Ltd.

Presentation Abstract:

This presentation describes common issues that occur with in adequate or poorly planned engineered site investigations. The issues are illustrated with statistics from various UK government departments but are relevant to today and North American practice, just as they were in the UK when collected. The presentation goes on to present examples of poor practice from the presenter's personal experience and also from the experience of others in Europe and North America. The presentation provides general advice and guidance from published sources and his own experience that may hopefully allow us to learn from the experiences of others and not repeat them.

About the Presenter:

Mr. Alistair James is a Senior Project Manager and Geotechnical Engineer with 27 years of experience in Europe and North America. Mr. James has been the lead designer, construction advisor and manager for a diverse range of civil engineering developments in oil sands, rail, highways, foundations and offshore in the private and public sector projects. This experience includes the design and construction of deep foundations, anchors, trawl and impact protection measures, pipeline stability analysis, unbound gravel roads, cut off walls, directional drilling, stabilization of slopes (including hard engineering and integrated bioengineered solutions) and underground mine workings, tunnels, and ground investigations. He has also become involved in developing relationships with First Nations to enable engineering and science opportunities for young people and communities.

Date: Thursday, December 15, 2022
Time: Presentation at 12:00 PM
Location: Holiday Inn South, 1330 Pembina Highway
RSVP: 12:00 PM, Monday, December 12, 2022
Registration Fee (debit, credit, PayPal):

Membership	Price ($)	Registration and Payment Link[1,2]
